

Spring Workshops/Classes on Ecology

Two **Mycotechnology** workshops have already taken place.

Tuesday, May 24, 10-11:30am. Ecology Presentations by Madison High School students who have been using the Dharma Rain site as a field lab for the last year. They will be presenting their methods and findings for those who are interested. Come support budding scientists!

Saturday May 28th, 10-11:30am. Ecology Outing for Children. Explore the sights, sounds and smells of Siskiyou Square. This hands-on sense **scavenger hunt** will allow children and their parents to learn about the plants and animals that call this place home. Please wear comfortable clothing and sturdy shoes for walking.

Presented by Kendra Pedersen-Morgan of City of Portland

Sunday, June 5th, 1-2:30pm. Native Wildflower ID. Come learn how to identify a variety of the native and invasive flowers, herbs and grasses represented at Siskiyou Square.

Presented by Jeff Lesh of Clackamas Soil and Water Conservation District

Thursday, June 9th, 7-8:30pm. Native Meadowscaing. Find out why a mix of native flowers and grasses might be a better option than turfgrass for your yard, and learn how to do it. Presentation will reference the work done in the savanna area at Dharma Rain.

Presented by Gaylen Beatty of Columbia Land Trust

Saturday, June 25th, 9-11. Deep Ecology. Ecology is the science of relationships, which occur simultaneously across multiple dimensions. The practice of deep ecology is to access the structure of interconnectedness that is one way to articulate and experience our true nature.

This workshop presents practices from several traditions that provide access to that deep truth in a way that is felt in the body, turning toward the physical plane as sacred.

Presented by Valerie Kaishin Kelly
